

Recycling Industry

We deliver clean air so companies operate safely, and families can be healthy together. It is the mission of Pleatco Filtration to be a best-in-class manufacturer and supplier of replacement and OEM filtration products.

Particulate & Odor Control

Air filtration plays a major role in recycling plants. Dust/fumes can be generated throughout the recycling process. As materials are collected, transported, and processed there are harmful particulate that if inhaled can carry many health risks. Odor Control is also important at a recycling plant as you want a clean and safe working environment for not only the workers, but the people that may live around the plant as well.

For media selection, we recommend something that can handle abrasive dust particulate.

Stocked Filters

We stock many standard OEM replacement filters that are able to ship within 48 hours!

Combustible Dust / Toxic Fumes

Combustible Dust Hazards exist in recycling applications; especially from paper dusts.

Manufacturing Excellence

All Pleatco filters are built to OEM specifications or better. We use a wide range of materials to build innovative products, delivered fast and cost effectively.
